

PRODUCT CATALOGUE

# Biomimetic **OCEAN**

The OCEAN system is a new line that adds to the range of Avinent implants. This new system has all the innovative features of the CORAL implant, as well as new concepts to provide a solution to emerging clinical and prosthetic needs. The shape of the OCEAN system shows outstanding aesthetic results at tissue level.

## CONTENTS

|                                         |    |
|-----------------------------------------|----|
| Surgical phase                          | 4  |
| <b>EC</b> External connection           | 4  |
| <b>IC</b> Internal connection           | 6  |
| <b>IC</b> Internal connection No Holder | 8  |
| <b>CC</b> Conical connection            | 10 |
| Accessories                             | 12 |

## Instruments and surgical kit

Avinent supplies high-precision instruments designed to match implants and suitable for use with internal, external and conical connections.

Avinent's two surgical boxes allow practitioners to choose the working system that best meets their needs.

**The sterilization cassette OCEAN** stands out for its clear layout and attractive design, making it easy to use. The drilling sequence is clearly indicated by means of a simple colour code according to the diameter of the selected implant. All the pieces are placed in a sterilizable tray with a seethrough lid, giving a clear view of the interior.

**The MiniBox** is versatile, as it allows practitioners to select a specific sequence and take everything required for the surgical procedure with them in a small container. The box is sterilizable and can hold all the items needed for inserting prostheses.

## Advisable torque

| TYPE       | VALUE     |                                                 |
|------------|-----------|-------------------------------------------------|
| Mechanical | 35 Ncm    | Screw for single/Multiple abutment*             |
|            | 30 Ncm    | Screw for angled titanium base**                |
|            | 30 Ncm    | Screw for angulation correction G2 (max. 30°)** |
|            | 20 Ncm    | Screw for angulation correction G1 (max. 20°)** |
|            | 15 Ncm    | Screw transepithelial angled abutment           |
|            | 15 Ncm    | Prosthetic screw for transepithelial            |
|            | 35 Ncm    | Transepithelial abutment (Uniblock / 2 parts)   |
|            | 30 Ncm    | LOCATOR® / LOCATOR R-Tx® Abutment               |
|            | 25 Ncm    | RHEIN83® Abutment (OT Equator)                  |
|            | 15 Ncm    | Temporary Abutment Ti                           |
| Manual     | ≈8-15 Ncm | Scan Abutment                                   |
|            |           | Impression coping open/closed tray engaging     |
|            |           | Healing Abutment Ti                             |
|            |           | Healing cap                                     |

\* Regarding: Titanium base, Cemented abutment and Cemented angled abutment, Castable CoCr Base. Included: Gold screw.

\*\* Except Transep. 4.8 of M1.40 which is 15 Ncm.

## Drilling speed biological protocol

|                        | rpm         |
|------------------------|-------------|
| Guide drill            | 800 - 1.200 |
| Drill ø 1,6 mm         | 800 - 1.200 |
| Pilot drill            | 600 - 800   |
| * Drill ø 2,0 - 3,3 mm | 150 - 300   |
| * Drill ø 2,2 - 3,8 mm | 150 - 300   |
| * Drill ø 2,8 - 4,3 mm | 150 - 300   |
| * Drill ø 3,2 - 4,8 mm | 150 - 300   |
| * Drill ø 2,4 - 3,3 mm | 150 - 300   |
| * Drill ø 3,0 - 3,7 mm | 150 - 300   |
| * Drill ø 3,8 - 4,3 mm | 150 - 300   |
| * Drill ø 4,1 - 4,7 mm | 150 - 300   |
| * Drill ø 4,2 - 5,7 mm | 150 - 300   |
| * Drill ø 5,1 - 5,7 mm | 150 - 300   |
| Screw Tap              | 20          |

\* The biological drilling at low revolutions (between 50 and 100rpm), allows to collect autologous bone as shown in the scientific literature.

Maximum recommended torque for implant insertion: 45-50 Ncm

Maximum recommended speed for implant insertion: 20 rpm

## Drilling speed standard protocol

|                      | rpm         |

Maximum recommended torque for implant insertion: 45-50 Ncm

Maximum recommended speed for implant insertion: 20 rpm

## Drill-bit length and marking

Avinent drills carry laser markings to improve visibility during osteotomy and follow a colour code according to the diameter of the implant. The marking corresponds to the length of the implant in crestal placement, but the distances are not absolute from the tip of the instrument to the mark. The length of the drill tip is not included in the depth mark, so this distance must be taken into account when planning treatment and in carrying out the osteotomy.

## Platform indicators

To make life easier for our costumers, Avinent screws attachments follow the color code of the implant platform (Only applicable to CC connection)

\* For any additional information and instrument maintenance instructions, please check [www.avinent.com](http://www.avinent.com)

## Avinent Biological drilling protocol

The Avinent surgical drilling protocol for the OCEAN system is suitable for all bone types. The system offers conical drills that adapt to the design of the implant. The finish of the drills makes it easier to locate the marks that indicate length during surgery. The biological drilling at low revolutions (between 50 and 100rpm), allows to collect autologous bone as shown in the scientific literature. Due to the surface treatment of the Avinent implant up to the platform level, it is advisable to leave the implant

at the juxtaosseous or subcrestal level according to clinical criteria.

These drills incorporate an optimized cut that guarantees better precision and efficiency in surgical procedures. In addition, DLC Treatment (Diamond-Like Carbon) technology has been integrated, which results in a type of coating that reduces wear, minimizes friction and extends the lifetime of the drills.

\* Hard bone drills are identified with two color indicators.

## Avinent Standard drilling protocol

The Avinent drilling protocol for inserting OCEAN system implants is based on the anatomical and morphological characteristics of the bone to be worked on, the aim being to achieve satisfactory primary stability and a good bone-implant contact percentage, key factors for good osseointegration. The diameter of the helicoidal drills in the system is related to the core of the implant to be inserted. Hence it is advisable to use the system's drilling sequence and instruments.

The finish of the drills makes it easier to locate the marks that indicate length during surgery. Due to the fact that the surface treatment of the Avinent implant extends to the level of the platform, it is advisable to leave the Implant at juxtaosseous or subcrestal level according to clinical criteria.

These drills incorporate an optimized cut that guarantees better precision and efficiency in surgical procedures. In addition, DLC Treatment (Diamond-Like Carbon) technology has been integrated, which results in a type of coating that reduces wear, minimizes friction and extends the lifetime of the drills.

\* Hard bone drills are identified with two color indicators.

| Implant ø 3,5 mm |                                                                                    |                                                                                    |                                                                                    |                                                                                    |                                                                                     |                                                                                      |

Avinent implants are subjected to a sterilization process in accordance with the requirements of the CE mark for medical device. Avinent supplies its implants in packaging that is easily identified by a simple colour code. The vial cap comes in different colours according to the diameter of the implant and has a sticker indicating the type of connection and the diameter and length of the implant.

The Avinent implant system is sold in a sterile blister pack, which ensures that the implant is fully protected until the given expiry date, so long as it is stored in suitable conditions.

Avinent supplies labeling with all its products that ensure every item can be properly traced by means of stickers that can be used in the patient's clinical history or in any other documentation required.

## Opening the packaging

- Open the box and take out the blister pack.
- Open the blister pack and leave the vial containing the implant in the sterile working area, avoiding contact with any item that is not sterile. The sterile blister pack must not be opened prior to use.
- Open the vial by gripping the coloured cap with one hand while holding the transparent part in the other.
- EC/IC: Fit the implant driver (manual and hand piece) into the implant holder.
- CC/IC (No Holder): Fit the implant driver into the implant.
- Press to make a tight fit and raise the implant set slightly.
- EC/IC: Open the black cap on the bottom of the vial to remove the cover screw.
- CC/IC (No Holder): The cover screw is inside the coloured cap.

## Surgical motors

Avinent offers a wide range of surgical motors designed for many clinical applications, produced by leading brands in the industry. Intended to simplify daily practice and for multiple users, they can be adapted to suit each practitioner's needs by allowing the entire drilling sequence to be customised.

Our surgical motors are ergonomically designed, easy to use and significantly help to reduce tiredness. They give implantology specialists a surgical unit for everyday use in safely carrying out oral procedures. All the surgical motors have been designed with the aim of minimising size and weight, to improve the balance of the instrument and motor in the practitioner's hand and thereby reduce tiredness during long treatments.

## Radiographic template

The radiographic template is a guide to help practitioners precisely select the appropriate implant diameter and length. To adapt it to the proportions of the x-ray, the dimensions of the implant are shown at a scale 1:1 and 1.25:1.
